

Meet the majestic and cool bald eagle, a bird that's not actually bald at all! Bald eagles are large birds of prey, with wingspans up to 7.5 feet wide, and they're known for their white heads and tails contrasted with dark brown bodies. Their sharp, hooked beaks are yellow, just like their penetrating eyes and powerful claws, known as talons. You might be surprised to know that their 'bald' look is actually due to the white feathers on their heads, which stand out against the rest of their dark feathers.

Now that you know how the bald eagle looks, let's explore where they make their homes. These magnificent birds are found throughout most of North America, from Alaska and Canada all the way down to northern Mexico. They love living near rivers, large lakes, and coastal areas because they eat a lot of fish. In fact, they build their nests, which are the largest of any North American bird and can be up to 9 feet wide, high up in tall trees or on cliff edges overlooking water.

Speaking of fish, let's dive into the bald eagle's favorite meal. Fish is the main part of their diet, but they're not picky eaters – they'll also gobble up small mammals, other birds, and even carrion. Bald eagles have an amazing hunting strategy – they swoop down over water at great speed and snatch fish right out with their talons! Sometimes, they even steal food from other birds, which shows just how clever and opportunistic they can be.

Having shared about their eating habits, it's time to talk about their life cycle and relationship with us humans. Bald eagles mate for life, and they return to the same nest each year to lay 1 to 3 eggs, which hatch after about 35 days. Humans and bald eagles have a mixed history - while some people admire their beauty and strength, others see them as competition for fish and game. Despite past threats, such as hunting and pesticide exposure, conservation efforts have helped bald eagle populations recover, and they continue to inspire us with their majestic presence and symbolize freedom in the United States.

Solve each problem.

Use the article to answer the question.

- 1) What are the nests built by bald eagles known for?
 - A. being the largest of any North American bird
 - B. being smaller than the bald eagle itself
 - C. being made of small logs they carry with their talons
 - D. being underground
- 2) How do bald eagles catch fish?
 - A. They swoop down over water and snatch fish with their talons
 - B. They wait for dead fish to float to the surface
 - C. They wait for fish to jump out of the water
 - D. They use a fishing rod
- 3) What color is the bald eagle's body?
 - A. Black
 - B. White
 - C. Gray
 - D. Brown
- 4) How long does it take for a bald eagle's eggs to hatch after being laid?
 - A. about 35 days
 - B. 1 year
 - C. 3 months
 - D. 2 weeks
- 5) What do bald eagles symbolize in the United States?
 - A. strength
 - B. happiness
 - C. freedom
 - D. wisdom
- 6) What is the main part of a bald eagle's diet?
 - A. fish
 - B. small reptiles
 - C. insects
 - D. fruits
- 7) Where are bald eagles' nests typically located?
 - A. on the ground in grassy fields
 - B. high up in tall trees or on cliff edges overlooking water
 - C. inside caves
 - D. inside hollow logs
- 8) Where are bald eagles typically found?
 - A. Africa
 - B. North America
 - C. Europe
 - D. Australia
- 9) How wide can the bald eagle's wingspan be?
 - A. About 5 feet wide
 - B. About 10 feet wide
 - C. About 2 feet wide
 - D. About 7 feet wide
- 10) After how many days do bald eagle eggs generally hatch?
 - A. About 21 days
 - B. About 60 days
 - C. About 35 days
 - D. About 90 days
- 11) What color are bald eagles' beaks?
 - A. Yellow
 - B. Black
 - C. White
 - D. Brown

- 12) Why are bald eagles called 'bald'?
- A. Because they lose feathers as they get older
 - B. Because of their yellow beaks
 - C. Because of the white feathers on their heads
 - D. Because they have no feathers on their head

Determine if the statements is something the animal would say (W) or it it is not something the animal would say (N).

- 13) "I live all over the world."
- 14) "I never eat fish, only small mammals."
- 15) "I make my home all over North America, near rivers, lakes, and coastal areas. This is because I love eating fish!"
- 16) "My wingspan is only a couple of feet."
- 17) "I only eat vegetables."
- 18) "I don't live near water, just near deserts and in forests."
- 19) "Fish is my favorite food, but I also eat small mammals, other birds, and even food that other birds have caught!"
- 20) "I'm doing pretty well now, but in the past, people hunted me."
- 21) "With a wingspan of 7.5 feet, I'm a big bird!"
- 22) "I always lay 10 eggs per season, no less, no more."
- 23) "Our nests are quite small, barely big enough for a single egg."
- 24) "I eat exclusively nuts and seeds."
- 25) "My nest, where I raise my babies, can be up to 9 feet wide!"
- 26) "I don't lay eggs."
- 27) "Some people love seeing me, but others think I take too many fish."
- 28) "After I lay my eggs, they take about 35 days to hatch."
- 29) "To catch fish, I swoop down over water really quickly and snatch them up with my talons!"
- 30) "I don't have any interest in fish. Give me some bugs, and I'm happy."
- 31) "I may look bald, but it's really just my bright white feathers on my head that make me look that way!"
- 32) "My mom lays 1 to 3 eggs each year."

Determine if the statement is a fact or opinion based on the information in the article.

- 33) The nests of bald eagles, which exist in tall trees or on cliff edges overlooking water, are considered the largest nests of any North American bird.
- 34) Bald eagles are the most magnificent birds on the planet.
- 35) These birds prefer habitats near rivers, large lakes, and coastal areas as they consume a lot of fish.
- 36) The fact that bald eagles return to the same nest every year is amazing.
- 37) The term 'bald' in bald eagles comes from the white feathers on their heads.
- 38) Bald eagles' ability to snatch fish right out of the water is incredible.
- 39) Bald eagles return to the same nest each year.
- 40) Bald eagles can be found in locations across North America.
- 41) Bald eagles look dangerous with their sharp hooked beaks.
- 42) The bald eagle's high-pitched call is quite annoying.

Determine if the statement is true or false.

- 43) Bald eagles are known for their white feathers on their heads.
- 44) Bald eagles have red eyes.
- 45) A bald eagle's nest can be up to 9 feet wide.
- 46) Bald eagles are picky eaters and only eat fish.
- 47) Bald eagles live near rivers and large lakes.
- 48) Most bald eagle nests are found on the ground.
- 49) Bald eagles are much smaller than most other birds.
- 50) Bald eagles return to different nests each year to lay eggs.
- 51) Bald eagles build their nests high up in tall trees or on cliff edges overlooking water.
- 52) Bald eagles are found only in North America.

Determine if the sentence is a declarative(d), exclamatory(e), interrogative(i) or imperative(m).

- 53) Bald eagles have excellent eyesight that allows them to spot prey from high in the sky.
- 54) Are bald eagles found in North America?
- 55) Bald eagles mainly eat fish.
- 56) Bald eagles have a wingspan of up to 7 feet.
- 57) Do bald eagles have white feathers on their heads?
- 58) Are bald eagles a type of bird?
