

Just imagine a snake with a beautiful, coppery-red head and you've got the Copperhead snake! This unique creature is a type of pit viper, and it has a distinctive pattern on its body that looks like an hourglass. Its body color ranges from tan to pinkish, and it can grow up to 3 feet long. Isn't it fascinating to think about a snake with such a stunning appearance?

Speaking of its appearance, it's interesting to know that the Copperhead uses its color as a camouflage when it's in its natural habitat. These sneaky snakes are found in different parts of the United States, from Florida to Massachusetts, and as far west as Nebraska. They love hanging out in forests, swamps, rocky areas, and even your own backyard! So, next time you're out exploring, remember that a Copperhead might be nearby, blending in perfectly with the leaves and rocks.

Now, you might be wondering, what does a Copperhead snake eat? Well, they're carnivores, which means they love to eat other animals! Their menu includes mice, small birds, lizards, and even other snakes. Using their venom to immobilize their prey, Copperheads are great hunters, even though they don't always win the battle against larger animals.

As we've learned, Copperheads are fascinating creatures, but they also have a complex relationship with humans. While they're not usually aggressive, they will defend themselves if they feel threatened, and their bite can be painful to humans. However, they also play an important role in controlling the population of rodents and other pests. So, let's remember to respect these beautiful, copper-headed creatures and their important place in our ecosystem!

Solve each problem.

Determine if the statements is something the animal would say (W) or it it is not something the animal would say (N).

- 1) "Our favorite food is fruits, especially apples and berries."
- 2) "I love eating mice, small birds, lizards, and even other snakes. Yummy!"
- 3) "You can find me in the United States, from Florida to Massachusetts, even as far west as Nebraska."
- 4) "My venom helps me hunt. But sometimes it doesn't work against bigger animals. We all have our strengths and weaknesses."
- 5) "I'm barely a foot in length, so I'm fairly small."
- 6) "My venom isn't for hunting, its main use is for digesting my food."
- 7) "I only eat plants and leaves."
- 8) "I prefer the cold, that's why you'll only find me up north in Canada."
- 9) "I am very aggressive and love to bite humans for no reason at all."
- 10) "I can grow up to 3 feet long."
- 11) "We Copperhead snakes are easy to spot because of our bright, neon green bodies."
- 12) "I have a special pattern on my body that looks like an hourglass. It helps me blend with my surroundings."

Determine if the statement is a fact or opinion based on the information in the article.

- 13) Copperhead snakes use venom to paralyze their prey.
- 14) Copperheads are the best hunters because they use their venom to catch their prey.
- 15) A Copperhead snake mostly eats other animals, like mice, birds and lizards.
- 16) Copperhead snakes are the scariest out of all the snakes because they might live in your backyard.
- 17) You can find Copperhead snakes in various parts of the United States.
- 18) It's impressive that Copperhead snakes can grow so long, up to 3 feet!
- 19) Copperhead snakes can grow up to 3 feet long.
- 20) Copperhead snakes are often found in forests and swamps.
- 21) The fact that Copperheads can eat other snakes is creepy.
- 22) The Copperhead snake's hourglass pattern on its body is the most interesting pattern out of all snakes.

Determine if the statement is true or false.

- 23) Copperhead snakes are found in the United States.
- 24) Copperhead bites can kill humans instantly.
- 25) Copperhead snakes sometimes eat other snakes.
- 26) Copperheads are usually found in parts of Southeast Asia.
- 27) Copperheads have a pattern on their body that looks like an hourglass.
- 28) Copperheads only eat birds.
- 29) Copperhead snakes are herbivores.
- 30) Copperheads can grow up to 30 feet long.
- 31) Copperhead snakes are carnivores.
- 32) Copperhead snakes can grow up to 3 feet long.

Determine which choice is the expanded form of the underlined contraction.

- 38) Copperhead snakes can swim and climb trees.
- 39) Are copperhead snakes venomous?
- 40) Copperhead snakes live in the eastern and central parts of the United States.
- 41) Copperhead snakes are venomous.
- 42) What do copperhead snakes eat?
- 43) Where can copperhead snakes be found?
