

Say hello to the fascinating creature called the devil's flower mantis! This bug is an expert in disguise, looking just like a beautiful flower. You might think it's just a pretty bloom, until you see its big, round eyes and long, spiky legs! It's colorful with shades of white, pink, and purple, and has a body shape that's truly unique, unlike any other mantis you've seen.

Speaking of unique, let's travel to their home in the wild! The devil's flower mantis lives in the warm and sunny parts of East Africa. They love hanging out in plants and flowers, blending in to stay hidden from enemies. They're quite the homebodies, spending most of their life in the same plant, from when they are born until they grow up.

Growing up as a mantis is quite an adventure! Their life starts from an egg, then turns into a nymph before becoming a full grown mantis. The devil's flower mantis is different from others because it can change its color to match the flowers it lives on. But don't be fooled by its pretty looks, this mantis is a predator that eats other insects, almost exclusively flies!

Now that we know what they eat, let's see how they get along with others! Humans don't need to worry about them, as they are harmless and don't bite or sting. They may look scary to other bugs, but they are actually quite shy and prefer to hide rather than fight. So remember, next time you see a beautiful flower in East Africa, take a closer look, it might just be a devil's flower mantis in disguise!

Solve each problem.

Use the article to answer the question.

- 1) What is the main purpose of the devil's flower mantis's colors?
A. To attract a mate. B. To scare off predators.
