

**Choose the statement that explains what the given value tells you about the data.****Answers**

- 1) The list shows the number of laps Faye ran each day.
12, 6, 1, 6, 3, 2
The mean of the data is 5. What does that tell you?
- A. Faye ran 5 laps more often than any other number.
B. If Faye had run the same number of laps each day, it would have been 5.
C. The greatest number of laps Faye ran was 5 more than the least.
D. Faye ran fewer than 5 laps half the time and more than 5 the other half.
- 2) The list shows the number of goals Robin scored in each game.
10, 12, 7, 11, 7, 8
The median of the data is 9. What does that tell you?
- A. If Robin had scored the same number of goals in each game, it would have been 9.
B. Robin scored 9 goals more often than any other number.
C. There were 9 numbers in the list.
D. Robin scored fewer than 9 goals half the time and more than 9 the other half.
- 3) The list shows the number of miles Billy biked each day.
3, 6, 7, 10, 5, 7
The mode of the data is 7. What does that tell you?
- A. Billy biked 7 miles more often than any other number.
B. There were 7 numbers in the list.
C. If Billy had biked the same number of miles each day, it would have been 7.
D. Billy biked fewer than 7 miles half the time and more than 7 the other half.
- 4) The list shows the number of letters Carol wrote each month.
1, 11, 12, 7, 7, 10
The mode of the data is 7. What does that tell you?
- A. If Carol had written the same number of letters each month, it would have been 7.
B. Carol wrote fewer than 7 letters half the time and more than 7 the other half.
C. Carol wrote 7 letters in all.
D. Carol wrote 7 letters more often than any other number.

1. _____
2. _____
3. _____
4. _____
