

**Choose the statement that explains what the given value tells you about the data.****Answers**

- 1) The list shows the number of miles John biked each day.
5, 3, 9, 3, 11, 12
The mode of the data is 3. What does that tell you?
- A. The greatest number of miles John biked at one time was 3.
B. If John had biked the same number of miles each day, it would have been 3.
C. John biked fewer than 3 miles half the time and more than 3 the other half.
D. John biked 3 miles more often than any other number.
- 2) The list shows the number of baskets Olivia made in each game.
9, 4, 4, 10, 2, 8
The median of the data is 6. What does that tell you?
- A. If Olivia had made the same number of baskets in each game, it would have been 6.
B. Olivia made fewer than 6 baskets half the time and more than 6 the other half.
C. The greatest number of baskets Olivia made was 6 more than the least.
D. Olivia made 6 baskets more often than any other number.
- 3) The list shows the number of laps Billy swam each day.
5, 2, 8, 3, 10, 8
The mean of the data is 6. What does that tell you?
- A. Billy swam fewer than 6 laps half the time and more than 6 the other half.
B. If Billy had swum the same number of laps each day, it would have been 6.
C. Billy swam 6 laps more often than any other number.
D. The greatest number of laps Billy swam at one time was 6.
- 4) The list shows the number of letters Frank wrote each week.
3, 11, 6, 4, 10, 4
The mode of the data is 4. What does that tell you?
- A. Frank wrote 4 letters more often than any other number.
B. Frank wrote fewer than 4 letters half the time and more than 4 the other half.
C. If Frank had written the same number of letters each week, it would have been 4.
D. There were 4 numbers in the list.

1. _____
2. _____
3. _____
4. _____
