

Imagine a bird with a bright red belly, hopping around your backyard. That's probably a robin! These lovely birds are known for their orange-red chests and dark grey-brown upperparts. They have sharp, pointed beaks and are about the size of a clenched fist. Their eyes are like small, dark beads that are always watching and observing.

After meeting them, you might wonder, where do these beautiful creatures live? Robins are found all over North America, and they prefer to stay in areas with trees and shrubs. They build their nests in the forks of trees, using grass and mud, and usually lay 3 to 5 eggs at a time. After about two weeks, baby robins are ready to leave the nest and start their own adventures.

Speaking of adventures, what do you think robins munch on during their busy day? They love to eat insects, earthworms, berries, and fruits. They are one of the first birds to start hunting for food in the morning, often before the sun even rises! This early bird behavior is why we have the saying 'The early bird gets the worm'.

Robins not only have a unique lifestyle but also share a special bond with us, humans. Many people enjoy watching and listening to robins, as they have a beautiful song and are very active during the day. They also help us by eating insects and worms that can be harmful to our gardens. So, the next time you see a robin, remember these fantastic facts about their life and how they brighten our days with their presence.

Solve each problem.

Use the article to answer the question.

- 1) What color is a robin's belly?
A. Grey B. Brown C. Red D. Black
- 2) Which do robins prefer to eat?
A. Mud B. Twigs C. Berries D. Leaves
- 3) How many eggs do robins usually lay at a time?
A. 1 to 2 eggs B. 3 to 5 eggs C. 9 to 10 eggs D. 6 to 8 eggs
- 4) How do robins benefit our gardens?
A. They often bury seeds in the garden soil
B. They peck the ground which gives gardeners a place to plant seeds
C. They help to fertilize the soil and produce better crops
D. The Eat animals that may cause harm to plants
- 5) What do robins use to build their nests?
A. Feathers and sticks B. Cotton and string
C. Leaves and twigs D. Grass and mud
- 6) Where do robins build their nests?
A. They don't build nests B. On the ground
C. In the forks of trees D. In birdhouses
- 7) How long it takes for baby robins to leave the nest?
A. About a year B. About a month
C. About two weeks D. About a week
- 8) When do robins start looking for food?
A. Before the sun even rises B. At sunset
