

Solve each problem.

Answers

- 1) Two companies are selling boxes of candy. The pieces of candy you get from Company A is represented in the table below. The pieces of candy you get per box from Company B is represented by an equation, with y representing the total number of pieces for x boxes.

Company A

Total Boxes	Total Pieces
15	12
450	360

Company B

$$y = 27x$$

1. _____

2. _____

3. _____

Find the total number of pieces you'd get from buying 17 boxes of candy from the company with the fewest pieces per box.

- 2) Two companies are selling sugar by the pound. The cost of sugar for Company A is represented in the table below, while the cost for Company B is represented by an equation, with y representing the total cost in dollars for x pounds of sugar.

Company A

Total Pounds	Total Cost (\$)
20	14
6.00	4.20

Company B

$$y = 0.24x$$

Find the total cost in dollars of buying 16 pounds of sugar from the more expensive company.

- 3) Two contractors are bidding on building a house. Contractor A's price is represented in the table below. Contractor B's price is represented by an equation, with y representing the total price and x representing the square feet of the house.

Contractor A

Square Feet	Total Price (\$)
1825	1140
237,250	148,200

Contractor B

$$y = 122x$$

What is the difference in the price per square foot between contractor A and contractor B?
